

Science Quest 2009 LIT Program

Like explosions?

How about kids?

The Science Quest LIT Program might be just what you're looking for!

**No campers were harmed in the making of this program

Science Quest is a non-profit, student-run science and engineering program run out of Queen's University. Every year we reach out to thousands of elementary school students through classroom workshops and summer camps. However, none of this would be possible without the help of people like you!

Our LIT Program involves a weekend of training (June 27-28) in which you'll learn about our program, our amazing projects, camper management, and everything you'll need to be an effective instructor! This session is not mandatory, but is strongly recommended for all participants. You will then have the opportunity to volunteer at our summer camps for as little or as much time as you can commit. At the end of it all, you'll receive certification of having completed our program, volunteer hours for the time you put in, and an absolutely amazing experience!

Our camps consist of Science Quest, Computer Quest, and Science Quest for Girls, all run for 9 weeks from June 29 – August 28. Campers are children who will be entering grades 4 – 8 in the fall, and all of our camps aim to teach real scientific concepts through fun and interactive activities. Activities include things like bridge building, Lego Robots, and water fights!

To register, please visit us online at www.sciencequest.ca, click on register, and fill out the LIT Registration Form!
